EDUCATION

Atish Dipankar University of Science & Technology

B.Sc. in Computer Science & Engineering (Awaiting Results)

Dhaka, Bangladesh

Jan 2023 – April 2026

Saic Institute of Management and Technology

Diploma in Computer Technology (CGPA: 3.33/4.00)

Dhaka, Bangladesh

2017 – 2020

- **Coursework:** Programming Logic (C), Database Management (SQL), Network & OS Fundamentals

SKILLS

Primary Languages: C#

Familiar Languages: C/C++/Python (Prior Experience)

Frameworks & Technologies: Dotnet (.NET)

Databases & Tools: MySQL, PostgreSQL, Redis, Seq, Git, Docker, AWS, Azure, Kafka, RabbitMQ

Concepts & Methodologies: OOP, Agile/Scrum, Functional Programming, DevOps basics, CI/CD pipelines

EXPERIENCE

Application Mentors Ltd

IT Assistant

Dhaka, Bangladesh

Mar 2022 – Present

- Provided technical support for Medical, Overseas Employment, and Hospital Management Systems, ensuring smooth operational workflow and data integrity.
- Identified, documented, and reported user-level software bugs to the development team, contributing to improved system functionality and performance.
- Managed and maintained SQL Server databases, including routine backups, user access control, and basic query optimization on Windows/Linux environments.
- Administered Linux (Ubuntu) and Windows servers, managing domain configurations (DNS/SSL via Cloudflare/WHM) and ensuring high system uptime.
- Configured and troubleshooted office LAN/WAN networks and IoT devices, providing a strong foundation in network protocols (TCP/IP) relevant to backend development.

PROJECTS

TenantBasedDukaan – Multi-Tenant E-Commerce Platform | [GitHub](#)

Personal Project — 2026

- Architected a scalable Multi-Tenant SaaS application using **Clean Architecture** (Domain, Application, Infrastructure, Host) to ensure strict separation of concerns and high testability.
- Implemented **Tenant Resolution Middleware** and **EF Core Interceptors** to enforce robust data isolation, preventing cross-tenant data leaks between merchants.
- Designed a generic **Repository Pattern** with Specification support and DTO-based communication to decouple API layers from underlying database entities.
- Integrated **JWT Authentication** with **Role-Based Access Control (RBAC)** to secure endpoints for Admins, Merchants, and Customers.
- **Tech Stack:** ASP.NET Core 8, Entity Framework Core, PostgreSQL, Clean Architecture, Custom Middleware, Design Patterns.

MiniOrm – Custom ORM Framework | [GitHub](#)

Personal Project — 2026

- Developed a lightweight Object-Relational Mapper (ORM) from scratch in C# to master EF Core internals, leveraging **Reflection** and **Expression Trees** for dynamic SQL generation.
- Implemented attribute-based Model-to-Table mapping, automated CRUD operations, and a custom migration engine for seamless schema management.
- Optimized data access performance by utilizing low-level **ADO.NET** capabilities for direct database communication.
- **Tech Stack:** C#, .NET 8, SQL Server, ADO.NET, Reflection, Expression Trees.
