EDUCATION

Atish Dipankar University of Science & Technology

B.Sc. in Computer Science & Engineering (CGPA: 3.29/4.00)

Dhaka, Bangladesh

Jan 2023 – April 2026

Saic Institute of Management and Technology

Diploma in Computer Technology (CGPA: 3.37/4.00)

Dhaka, Bangladesh

2017 – 2020

- **Coursework:** Programming Logic (C), Database Management (SQL), Network & OS Fundamentals

SKILLS

Primary Languages: C#

Familiar Languages: C, C++, Python (Prior Experience)

Frameworks & Technologies: .NET, ASP.NET Core, MediatR, Serilog, Seq, Docker, Git

Databases & Tools: SQL Server, PostgreSQL, MySQL, Redis, AWS, Azure

Concepts & Methodologies: OOP, Clean Architecture, RESTful APIs, CI/CD pipelines, DevOps basics

EXPERIENCE

Application Mentors Ltd

IT Assistant

Dhaka, Bangladesh

Mar 2022 – Present

- Administered hybrid Linux (Ubuntu)/FreeBSD servers, optimizing ZFS storage (RAID/Mirror/ashift configurations) and managing hardware infrastructure including NVIDIA GPUs and ECC RAM.
- Optimized enterprise LAN/WAN networks using MikroTik routers (TCP/IP) and secured cloud infrastructure via Cloudflare Tunnels, DNS/SSL configurations, and custom email routing.
- Collaborated with developers to integrate ZKTeco biometric fingerprint systems and provided cross-functional support/bug tracking for BOEMS, Hospital Management, Medical and HR software.
- Managed IT procurement, vendor relations (ISPs, suppliers), and streamlined operations by executing quotation evaluations, Work Orders, and Purchase Orders (PO).

PROJECTS

StackOverflow Clone – Q&A Platform | [GitHub](#)

Personal Project — 2026

- Designed and built a production-grade Stack Overflow-style Q&A platform from scratch using **Clean Architecture** (Domain, Application, Infrastructure, Host) with strict layer separation and zero cross-layer dependency violations.
- Implemented **CQRS** via **MediatR** with custom **ICommand/IQuery** abstractions and a **FluentValidation Pipeline Behavior** that auto-validates all requests before reaching handlers — zero validation code inside handlers.
- Engineered **JWT Authentication** with **UserProfileId** baked into token claims, eliminating per-request DB lookups, and enforced business rules (self-vote prevention, author-only accept, reputation floor) at the handler level using the **ErrorOr** result pattern.
- Integrated **Redis** for atomic view-count tracking and paginated question-list caching with cache invalidation on write; configured **Serilog** structured logging to **Seq** with a Global Exception Middleware for centralized observability.
- Containerized the full stack (API, PostgreSQL, Redis, Seq) with **Docker Compose**, including multi-stage Dockerfile for optimized image size and AOF-enabled Redis persistence.
- **Tech Stack:** ASP.NET Core 10, EF Core, PostgreSQL, MediatR, FluentValidation, Redis, Serilog/Seq, Docker Compose, Clean Architecture, JWT, ErrorOr.

CERTIFICATIONS

ASP.NET Core Backend Development | *ServerCamp Batch-3*

CodeCamp by Astha IT — 2025 – 2026

- Completed an intensive 5-month hands-on backend development program covering Clean Architecture, CQRS (MediatR), EF Core, JWT Authentication, Redis, Docker, and CI/CD pipelines.
